

MACROECONOMIC INDICATORS IN UZBEKISTAN CHANGE ANALYSIS AND SOLUTIONS

Qo'chqorov Nodir Bozorovich

ABSTRACT

First of all, the object and subject of knowledge in this theory the concept is defined.

Objective behavior directly to the content of the first concept, the practice is made up of individuals who form the basis of the material activity of a person, that is, the development of society.

The second concept is human self, society, humanity i.e. denotes a person who approaches the object of knowledge creatively.

The dialectical unit of the object and subject of knowledge is its ensures reliability and veracity.

Practice and its perceptible objects-aspects of material, social, economic and environmental content is the object of knowledge. Summarizing the methods and techniques of modern sciences it can be said that in the process of cognition a wide range of the following tools used: analysis and synthesis, expression, modeling.

It should be noted that is the one that justifies it all, as well as they are individuals who carry out, that is, specialists. They are in essence; the whole condition is highly analyzed-synthesized it is the thinking ability of a person who does.

Thinking, understanding as a creative process, judgment, conclusion
Objective realism: phenomena, objects, relationships, indicators of their shape and content and characteristics according to differ, are divided into groups and in the means of thinking generates a certain concept.

Something is confirmed or denied through judgment.

The analyzed processes are synthesized and a conclusion is drawn. From what is said, it is known that through the theory of cognition is reliable about a particular object of the being studied and we will have the right information.

Knowledge as the methodological basis of all network Science the theory is also the essence of Economic Analysis, its necessity and clarifies the result.

Economic analysis is a practical science. If it is to the theory of cognition in the practical activities of the, if the foundation is developed, the elegance and economic efficiency increases. Which is the science's own in practical life indicates.

The word "analysis" is derived from the Greek word for analysis which means "I will be" or "I will separate" denotes. So, by analysis, in a narrow sense, the whole is divided into parts (elements) by dividing, dividing into pieces, its constituent it is understood to learn the story.

It should also be noted separately that the face in real reality in the study of the given phenomenon and process, only the analysis itself will not be enough. Another that corresponds to human thinking the use of methods is also a great necessity in many cases is born. A "synthesis" that comes very close to analysis in this sense is a method by which some of the studied collection is connections between units and reciprocal dependencies are defined.

The term "synthesis" is derived from the Greek word "synthesis", which means, means "I will unite", "I will add". Current modern dialectics, synthesis and analysis are viewed as scientific methods of studying the phenomenon and process occurring in real reality. Is it a phenomenon only in the combination of analysis and synthesis every? allows scientific study in a comprehensive dialectical connection.

The category of analysis and synthesis (analysis and generalization) is also

it is considered one of the methodological foundations of Economic Analysis.

Analysis by definition, a whole whole object is divided into separate betakes learning. Generalization (synthesis) is the one under study it is used to reach a holistic conclusion about an object. In it conclusion made on all slices of the object generalizing
